AUSTRALIAN STANDARD COMMODITY CLASSIFICATION

Introduction

1. The Australian Standard Commodity Classification (ASCC) is one of a number of standards used in the ABS to facilitate the collection and publication of an integrated set of statistics. Whereas the Australian Standard Industrial Classification (ASIC) is used by the ABS to classify business units into a set of industries, the ASCC is concerned with the classification of goods and services which are the product outputs of such industries.

2. This revised edition of the ASCC covers transportable goods only. Within the headings of the Standard International Trade Classification (SITC), the ASCC presents the range of such commodities used in the collection and publication of ABS statistics for the agriculture, forestry, fishing, hunting and trapping, mining and manufacturing industries in respect of 1989-90. It incorporates recent extensive changes to the range of manufacturing production commodities, aimed at substantially improving their relatability with trade commodity items, which were themselves rebased on the Harmonized Commodity Description and Coding System (HCDCS, or HS) from 1 January 1988.

3. This edition of the ASCC is issued as an interim classification pending the completion of reviews of both the ASIC and the HS. The ASIC is currently being reviewed and it is expected that the revised classification will be released in late 1991. The completion date of the HS review is less certain. Nevertheless, it is expected that a revised edition of the ASCC will be issued in conjunction with the next full manufacturing census in 1993. In addition, the next edition of the ASCC will cover all goods and services, not just transportable goods. Consideration is being given to adopting the United Nations Central Product Classification (CPC) as the standard framework for that edition.

International developments

4. The United Nations and other international organisations in association with the customs and statistical agencies of major trading nations have developed an inter-related set of classifications of activities (industries) and commodities. These comprise the International Standard Industrial Classification (ISIC) Revision 3, the HS, the SITC Revision 3 and the CPC. As part of the world programme of harmonization the ABS and other major national statistical agencies are progressively rebasing their classification systems to align with these international standards as closely as possible thereby facilitating international data comparisons.

5. For goods which are typically subject to international trade and consequently to customs administration, the HS is now the effective international standard which describes and defines this class of goods. The categories of the SITC Revision 3 are defined by the HS. A one to many relationship exists between these classifications. The SITC is a more aggregated classification than the HS and is still preferred by many analysts for statistical applications. The CPC has been developed as a multi-purpose classification covering all goods and services, its categories for transportable goods being composed of one or more whole HS items. It has been the focus in the international development of standard categories for services and non-transportable goods.

Nature and purpose of the ASCC

6. The primary purpose of the ASCC is to facilitate the use of commodity statistics by governments and private organisations in applications such as the analysis of market shares; analysis of the relationship between employment, industrial structure and tariff provisions; studies of import competition and replacement; submissions to the Industries Commission;

AUSTRALIAN STANDARD COMMODITY CLASSIFICATION

the compilation of input-output tables; and the conduct of trade and tariff negotiations. In further extending the ASCC to cover services and non-transportable goods, the ABS objective will be to improve the quality and range of commodity statistics available for market and sectoral analysis.

7. The current version of the ASCC is aimed at improving:

- . comparability between production, import and export statistics
- . links between commodities and industries, and
- . comparability between Australian and international standard commodity classifications.

8. This edition of the ASCC formally presents production commodity items in a complete classification. By showing the links to the underlying international standard classifications and to the ASIC, users and suppliers of ABS commodity data are provided with a reference to the definitional basis of the commodities concerned. This information underpins the analysis and interpretation of production commodity statistics and will assist in the process of future production commodity reviews. In addition, this publication contains information on the nature and extent of changes resulting from the recent review of manufacturing commodities.

9. With the adoption of the HS on 1 January 1988, international trade import and export commodity statistics have been brought into complete alignment at the six-digit level of the HS code system. As a signatory country to the HS Convention, Australia, and hence the ABS, has a mandatory responsibility to collect and publish trade statistics according to these categories without deviation. This was not the case under the previous Standard International Trade Classification arrangement, and therefore these two trade series were not completely comparable at the international standard level prior to the adoption of the HS.

10. The consistency introduced to trade statistics is reflected in the 5019 HS 6-digit commodity codes and descriptors which are identical for both the import and export series and generally stable over time. These are a minimum list of items and trade statistics are available at a much finer level of detail.

Scope of the current ASCC

11. The current version of the ASCC covers all transportable goods, although not all items are collected and published by the ABS.

Structure of the classification

12. Whereas previous editions of the ASCC have grouped commodities within an industry of origin broad structure, defined by the Australian Standard Industrial Classification (ASIC), this revised edition groups commodities according to the broad structure of the Standard International Trade Classification (SITC), Revision 3. The SITC is compatible with the HS, its categories being composed from whole HS 6-digit building blocks. It has been possible for the ASCC to follow the structure of the SITC down to its three-digit level almost without exception. Below this level, correspondence between the SITC (which is a 5-digit classification) and the detailed ASCC production commodity items is variable.

13. In many instances, correspondence between the international standard and individual production commodities is at a finer level than the 3-digit SITC heading. Instances where this occurs can be identified by reference to the SITC concordance which runs adjacent to the production item listing.

AUSTRALIAN STANDARD COMMODITY CLASSIFICATION

14. Within the detailed classification the SITC is used as a structural device on the left side, and as a definitional device in combination with the HS codes on the right side of each page. Units of quantity applicable to each production item along with the ASIC industry of origin code are also given.

15. An example of the structure of the detailed classification is as follows:

SITC	ASCC	DESCRIPTION	UQ	ASIC	SITC	HS
5		CHEMICALS AND RELATED PRODUCTS, N.E.S.				
51		ORGANIC CHEMICALS				
511		HYDROCARBONS, N.E.S., AND THEIR HALOGENATED, SULPHONATED, NITRATED OR NITROSATED DERIVATIVES				
511.1		Acyclic hydrocarbons				
	511.15	- Acetylene gas	Th cu m	2752	511.19p	2901.29p
	511.16	- Other (eg ethane, butane, ethylene, propylene)	kg	2754	511.11 511.12 511.13 511.14 511.19p	2901.10 2901.21 2901.22 2901.23 2901.24 2901.29p

16. The SITC and HS codes shown on the right side of each page also provide the links required for the compilation of comparable import, export, and production statistics. Because of the frequent occurrence of part relationships (indicated by the use of the abbreviation 'p'), a table of comparable commodities is included in this manual. In some cases it may be possible to construct more detailed comparisons by reference to the most detailed items of the Australian Harmonized Export Commodity Classification (AHECC) and the Combined Australian Customs Tariff and Statistical Nomenclature (HSTISC). Alternatively, estimation techniques may be employed by users with specialised knowledge of commodity flows to devise more detailed data comparisons than those given in this manual.

AUSTRALIAN STANDARD COMMODITY CLASSIFICATION

17. A number of other features of the ASCC are explained in terms of the following extract.

SITC	ASCC	DESCRIPTION	UQ	ASIC SITC	HS

263.2	999.91	Cotton linters		263.20	1404.20

18. There are three distinctly different sets of codes shown in the ASCC field of this manual. Items collected in manufacturing censuses or surveys are displayed with a 5-digit code in the form 'nnn.nn'. Items collected in agricultural censuses and surveys are displayed with a 7-digit code in the form 'nn.nnn.nn'. Items collected by the ABS in relation to mineral production are displayed with a 3-digit code in the form 'nnn'. In all cases the codes shown are those used in the respective collections to identify the commodities concerned, and should be quoted in all references.

19. In the above example, the integrated nature of the ASCC is demonstrated. Under SITC heading 263.1, ASCC item 263.10 'Cotton (other than linters), not carded or combed', which is keyed to ASIC 2341, relates to output from the manufacturing sector. The other codes shown (ie 18.030.03 to 18.032.03) are keyed to ASIC 0194 indicating that they are outputs from the agricultural sector. Heading 263.1 therefore accounts for the total value added of 'cotton (other than linters), not carded or combed'. It should be noted that outputs from the agricultural sector are used as inputs in the production of outputs by the manufacturing sector. Caution should be used in interpreting aggregations of commodities from different industries or different industry divisions.

20. Three special ASCC codes are used throughout this manual. These are '999.91', 'xxx', and '997'. Examples of the first two are shown in the above extract.

AUSTRALIAN STANDARD COMMODITY CLASSIFICATION

21. The code '999.91' is the residual category relating to the Manufacturing Census. It indicates that in the collection of manufacturing commodity statistics, the ABS has not requested specific details of the commodity concerned. Any reported production of the commodity is tabulated to the residual category 999.91 'Articles, nes'.

22. The codes '579', '648' and '745' are the residual categories relating to the Mining Census, being 'Other Metallic Minerals', 'Other Construction Materials' and 'Other Non-Metallic Minerals' respectively.

23. The code 'xxx' relates to commodities not covered by ABS production collections in respect of agricultural, gas, coal, forestry, fishing and hunting industries. It indicates that details of the commodities concerned are not collected by the ABS, and represent a gap in the coverage of ABS commodity statistics. In some cases, the commodity is either of nil or insignificant value. In other cases, details may be near impossible to collect due to the nature of the producing activity, or the difficulty of identifying and contacting producers.

24. In devising individual commodities, a number of factors are taken into account:

(i) International standard classifications

There is a need to address the requirements of the international standard classification adopted as the basis of the particular commodity series. In the case of the trade statistics collections, the Harmonized Convention, to which Australia is a signatory, requires that the detailed HS 6-digit items be used as a mandatory base level. In the case of domestic production statistics, no such convention applies. However, in order to design commodities which are comparable across statistical series, a compatible international standard needs to be applied at some level of detail.

(ii) Industry of origin considerations

The objective is to design each commodity category so that it can be related to its principal industry of origin. Commodity statistics grouped by industry of origin can be used as indicators of change in industry output, value added, demand for materials, and capacity utilisation. Furthermore, establishments are usually assigned to industries according to the products they produce.

By using a commodity to industry concordance, it is possible to classify establishments to industries according to their outputs as reported in ABS full-year commodity collections. Although the producing industry can be other than the assigned industry of origin the industry of origin represents the main producing industry, and is therefore a useful device. In the ASCC, where the broader nature of some commodities precludes the assignment of a single industry of origin, a higher level ASIC code has been used, corresponding to the ASIC Group, Subdivision, or Division level.

As an example, ASCC item 081.53 'Brewing or distilling dregs or waste', has been assigned the ASIC industry of origin code '2180'. There are three product components to this category which are considered to be significant: spent hops and dregs of cereals obtained in the manufacture of beer (ASIC 2186); malt sprouts separated from the malted grain during the kilning process (ASIC 2187); and waste from the distillation of other alcoholic beverages (ASIC 2189). In this case the assigned industry of origin code represents ASIC Group 218: Beverages and Malt.

AUSTRALIAN STANDARD COMMODITY CLASSIFICATION

(iii) User requirements

Further dissection of items was undertaken, where necessary, to reflect user requirements. Users include private businesses, Government Departments and agencies at all levels of government, international organisations, industry associations, and projects within the ABS. The requirements of different users are not always compatible.

(iv) Respondent burden

Commodities should be readily identifiable from business or administrative records; an undue burden should not be placed on respondents to identify and separately record details of commodities.

(v) Cost considerations

Generally, because of the burden on respondents and the cost of editing and processing data, commodity items should be of a significant value in proportion to the total output of the particular industry.

(vi) Confidentiality provisions

Items should generally be publishable and not subject to suppression due to the confidentiality provisions of the Census and Statistics Act 1905.

Comparison of production and trade statistics.

25. There are a number of factors which create difficulties when attempting to make data comparisons between trade and domestic production statistics. These include:

- . the incompatibility of the commodity definitions at the level of detail sought by the user. Although some significant advances have been made in recent years, fine level comparisons (ie say for an individual item of production) may not be possible.
- . the incompatibility of units of quantity applicable in each series.
- . differences in the basis of valuation of the goods concerned.
- . difficulties due to timing factors in the recording of import and export movements, and in interpreting apparent irregularities arising on account of the build up or run down of stocks by producers or merchants.
- . limitations in the scope or coverage of collections. For example, the production of manufactured goods by non-manufacturing establishments is not covered by ABS Manufacturing Production statistics.
- . the unknown amount of particular commodities assigned to residual categories during the processing of survey responses. For example the total value of the category '999.91 Articles, nes' in the Manufacturing Census is of significant proportions generally. Some of the content of this item can be attributed to commodities which rightly belong to other more specific items but, because of their minor value and the clerical processing overhead, were not reassigned to their correct classifications.
- . differences in quality and material composition, or variations in the import component of goods, which may affect the validity of assuming, for instance, that imported goods are a substitute for locally produced goods.

AUSTRALIAN STANDARD COMMODITY CLASSIFICATION

the introduction over time of changes in the definition of individual commodities. This may create difficulties in comparing commodity statistics over time. Changes to commodities are required in order to reflect the evolving requirements of users, and to reflect current products, technologies and changing patterns of production and trade activity.

the need to preserve the confidentiality of some items of data in one or more statistical series. This arises due to the small numbers of respondents reporting in respect of individual commodities in some cases.

Treatment of production items in ABS collections

26. The agricultural commodity items included in the ASCC are those used for the collection of agricultural data by the ABS, but the ASCC excludes a number of items which relate specifically to live animal holdings (ie stocks). The agricultural collection presently uses separate codes and descriptors for each of the observations of stocks, sales, and other disposals for live animals; for most live animal categories a production item is not collected. Stocks items for live animals are at a more detailed level than sales items. This situation creates presentation difficulties and therefore live animal codes relating to stocks items are not shown. For most purposes, users may find it convenient to use sales and other disposals items as a proxy for production.

27. The agricultural collection also covers commodities which relate to capital stocks, services, and non-transportable goods. These items are outside the scope of this edition of the ASCC.

28. ABS production items relating to the Australian fish catch, are omitted pending the resumption of publication of Australia-wide statistics by the ABS. This is conditional on the outcome of investigations into the basis, scope and coverage of State Fisheries statistics, which are the source of ABS statistics on fish production.

29. In the case of mineral production, the items used in the ASCC are those for which statistics are published in the ABS publication 'Mineral Production, Australia' (8405.0). Data on mineral production are collected and supplied to the ABS by State Mines Departments.

30. In the case of manufacturing activity, the items included in the ASCC are those within the scope of the 1989-90 Manufacturing Census. A subset of these items is also used in the collection of monthly production statistics. The monthly production collection is presently restricted to the collection of quantities produced. Whilst a Manufacturing Census is conducted each year, commodity detail is collected only on a triennial basis. Following the 1989-90 Manufacturing Census, the next full census is planned for the 1992-93 financial year.

Concordances and comparable data items

31. This manual includes tables of concordances (or reverse concordances) between ASCC items and related items of the ASIC, HS and SITC, as a complement to the detailed classification. A concordance between two classifications identifies the relationship between individual categories in them. For example, an item in one classification can be equivalent to one or more whole or part items in the other. A concordance may therefore serve as an index to assist in locating individual categories in related classifications. A difficulty in using concordances is to know how to treat part relationships.

32. To assist users in overcoming the problem created by part relationships this manual includes tables showing sets of comparable data items (CDIs) between ASCC and HS classifications and the ASCC and the SITC classifications. These show the lowest level of equivalence between groups of whole items in each classification. For example, two items aggregated from one classification may be equivalent to say three items in the other. Sets of

AUSTRALIAN STANDARD COMMODITY CLASSIFICATION

comparable data items identify the lowest level at which direct translation of whole items between the two classifications occurs.

33. A reverse concordance linking ASCC items with their industry of origin is included to assist users wishing to analyse the commodity coverage of particular industry sectors. A concordance linking new manufacturing ASCC items to old items is included to assist users comparing commodity statistics over time. Separate concordances of items collected in agricultural and mining collections linked to SITC are included to assist users wishing to locate items from these collections in the ASCC.

Relationship between the ASCC and other ABS classifications

34. The Australian Transport Freight Commodity Classification (ATFCC) can be related to the ASCC at a broad level. The ATFCC was developed to act as a standard for the Australian transport industry and to describe commodities which are important in terms of transportation activities. Whereas the ASCC is broadly structured according to the 3-digit level of the SITC (Revision 3), the ATFCC is broadly structured according to the 2-digit level of the same version of SITC. At this broad level of aggregation, it would be possible to compare commodities produced, imported and exported, with the movement of these goods by various transport modes. Aggregates at this level are produced by the ABS for imports and exports. With the introduction of the commodities in this edition of the ASCC, similar aggregates could be produced for domestically produced goods.

35. The Materials Used Classification (MUC) has been 'harmonized' with the ASCC. Items in the MUC are composed of one or more whole ASCC production items, and are used in the ABS to measure the consumption of goods by establishments producing commodity outputs. The input-output model not only includes Australian output, but also imported commodities. The assumption of a functional relationship between an industry's inputs and its outputs is an important economic consideration. Commodity flows are used to gauge the consequential effect on the rest of the economy of observed or postulated changes in demand.

36. The Materials Used Classification shown in the back section of this manual is a partial list only. It contains those items which are either formed from two or more ASCC items, or for which descriptions have been significantly reworded to eliminate hierarchic structures. The balance of commodities not included in the list of materials used, are to be found in the ASCC detailed classification.

37. The ABS has published comparable value statistics for Australian production, imports and exports of both goods and services for all sectors of the economy on an annual basis up to 1983-84, and will be publishing this data on a triennial basis from 1986-87 onwards in the Input-Output Commodity Details publication (catalogue 5215.0). The classification used is the Input-Output Commodity Classification (IOCC), which is an industry of origin classification, is structured in accordance with the 1983 or earlier versions of the ASIC. Concordances between IOCC groupings and commodity categories collected by the ABS are available for all manufacturing census years up to 1989-90, and will become available for subsequent years in due course.

AUSTRALIAN STANDARD COMMODITY CLASSIFICATION

38. The Combined Australian Customs Tariff and Statistical Nomenclature, and the Australian Harmonized Export Commodity Classification are extensions of the Harmonized System, and as such are related to the ASCC via the HS codes which define individual ASCC items. The classifications are used for Australian Customs administrative purposes and for the collection and compilation of foreign trade statistics.

ASCC products

39. The ABS supports the definitions of commodities in the ASCC and will, on request, provide determinations or advice on the classification of goods in the ASCC. Advice may be sought from any State Office of the ABS, or by contacting the Supervisor, Commodity Classification, PO Box 10, Belconnen ACT 2616 (phone (06) 2527469).

40. The material provided in this edition of the ASCC can be made available on electronic media, subject to conditions of sale. It is available on floppy disk for \$300 (see ABS catalogue number 1255.0).

41. The ABS is developing computer assisted classification (CAC) systems (for IBM compatible PCs) to encourage and facilitate the use of the ASCC and a number of other classifications. CAC systems are interactive software products designed to assist with the process of classification by allowing the user to input an abbreviated keyword, and then choose branch options to further specify the subject until it can be uniquely identified and allocated the appropriate code and descriptor.

42. A prototype CAC system for manufactured commodities is available for evaluation and purchase on request. The product will be further developed over time to improve its performance and functionality. In the longer term, it is planned to expand the coverage of this system to all goods and services as a complement to future editions of the ASCC.

71661	Electric motors (excluding for motor vehicles, generating sets)	3357	716.61 716.62 716.63 716.64 716.65 716.66 716.67 716.68 716.69 716.70 716.71 716.72 716.73 716.74 716.75 716.76 716.77 716.78 716.79 716.81 716.82 716.83 716.84 716.85 716.86 716.87 716.88 716.89 716.91
71694	Parts suitable for use solely or principally with electric motors, generators, rotary converters or generating sets, not elsewhere specified	3357	716.94
71895	Engines and motors, not elsewhere specified	3369	718.95
72391	Parts for construction and earthmoving equipment	3362	723.91
72635	Prepared printing plates, blocks and cylinders used to produce printed matter	2645	726.35
72860	Industrial machinery and parts, not elsewhere specified	3360	728.60
73590	Parts and accessories for machine-tools or presses, for working metal	3367	735.90
74122	Furnace burners for pulverised solid, liquid or gas fuels (including combination burners)	3369	741.22
74125	Mechanical stokers, mechanical grates, mechanical ash dischargers and similar appliances	3369	741.25
74126	Industrial or laboratory electric furnaces and ovens (including induction or dielectric); other industrial or dielectric heating equipment	3357	741.26
74127	Industrial or laboratory non-electric furnaces and ovens (including incinerators)	3369	741.27
74151	Air conditioning machines, window or wall types, self contained	3353	741.51
74154	Air conditioning machines (excluding domestic), not elsewhere specified	3366	741.54

Materials used other than those listed in this classification are coded to their relevant ASCC items. See explanatory notes for more detail.

CODE	DESCRIPTION	ASIC	ASCC
74210	Pumps for liquids	3365	742.10 742.41 742.50 742.61 742.62 742.82
74315	Compressors of a kind used in refrigerating equipment	3353	743.15
74344	Fans - industrial	3369	743.44
74492	Parts for lifting, handling, loading or unloading machinery (excluding for work trucks)	3360	744.92
74519	Parts for tools for working in the hand, pneumatic or with self-contained non-electric motor	3360	745.19
74529	Parts: for commercial and domestic dishwashers; for bottle drying machines etc; for filling, sealing, capsuling or labelling machines; for beverage aerating machines; for other packaging machinery	3300	745.29
74565	Mechanical appliances for projecting, dispersing or spraying liquids or powders, not elsewhere specified	3300	745.65
74751	Cast iron taps, cocks, valves and similar appliances (including parts thereof), for pipes, boiler shells, tanks, vats and the like	2942	747.51
74752	Cast steel taps, cocks, valves and similar appliances (including parts thereof)	2943	747.52
74753	Other steel taps, cocks, valves and similar appliances (including parts thereof), for pipes, boiler shells, tanks, vats and the like	2945	747.53
74754	Non-ferrous metal taps, cocks, valves and similar appliances (including parts thereof)(including pressure reducing and thermostatically controlled valves)	3165	747.54
74870	Cranks, crankshafts, camshafts, bearing housings, gears, gearing and flywheels for internal combustion engines, for motor vehicles, trucks and tractors	3003	748.70
74910	Moulding boxes for metal foundry; mould bases; moulding patterns; moulds for metal (other than ingot moulds); metal carbides, glass, mineral materials, rubber or plastics	2000	749.10
76381	Video recording or reproducing apparatus	3351	763.81
76431	Transmission apparatus for radio-telephony, radio-telegraphy, radio-broadcasting or television (including combined transmission/reception apparatus)	3352	764.31
76491	Parts of electrical line telephonic and telegraphic apparatus	3352	764.91
76493	Parts of television and radio receiving and broadcasting, video and telecommunications equipment, not elsewhere specified	2000	764.94 999.91
77121	Static converters (eg rectifiers)	3352	771.21
77126	Inductors (eg chokes, ballasts used with lighting apparatus, etc, current limiting regulators)	3357	771.26
77220	Printed circuits	3352	772.20
77236	Rheostats, potentiometers and resistance boxes	3357	772.36
77237	Electrical resistors (excluding heating resistors, potentiometers, rheostats, resistance boxes and printed circuits)	3352	772.37
77256	Apparatus for making, breaking, protecting and making electrical connections for motor vehicles, trucks and tractors	3233	772.56

Materials used other than those listed in this classification are coded to their relevant ASCC items. See explanatory notes for more detail.

MATERIALS USED CLASSIFICATION

CODE	DESCRIPTION	ASIC	ASCC
77271	Electrical apparatus for switching or protecting electrical circuits, or for making connections to or in electrical circuits (excluding vehicle and for radio, telephone, telegraphic)	3357	772.71
77272	Relays and relay sets for radio, telephone and telegraphic applications - For a voltage not exceeding 1000 volts	3352	772.72
77311	Winding wire	3355	773.11
77312	Co-axial cable and other co-axial conductors: insulated wire, cable, etc, not elsewhere specified	3355	773.12
77328	Plastic insulating fittings for electrical machines, appliances or equipment	3474	773.28
77329	Insulating fittings for electrical machines, appliances or equipment, not elsewhere specified	2000	773.29
77420	X-ray apparatus (including parts, accessories and radiological apparatus)	3352	774.20
77551	Parts of electric instantaneous, storage and immersion water heaters	3354	775.51
77592	Heaters, defrosters, demisters and air conditioners, for motor vehicles, trucks and tractors	3352	775.92
77640	Electronic integrated circuits and micro-assemblies (excluding printed circuits)	3352	776.40
77692	Solar cells (photovoltaic cells)	3352	776.92
77693	Electronic valves and tubes (eg cathode ray tubes); photocells (excluding solar cells); mounted piezo-electric crystals; semi conductor devices (eg diodes); light emitting diodes, not elsewhere specified	3352	776.93
77701	Electrical equipment for motor vehicles, trucks and tractors, not elsewhere specified	3233	777.01
77827	Lighting and signalling equipment for motor vehicles, trucks and tractors	3233	778.27
77832	Starting and ignition equipment, for internal combustion engines, for motor vehicles, trucks and tractors	3233	778.32
77836	Spark plugs (all types)	3233	778.36
77855	Battery components	3356	778.55
77857	Electrical capacitors, fixed, variable or adjustable (pre-set)	3352	778.57
77892	Electrical machinery and equipment and parts thereof, not elsewhere specified	3357	778.92
78410	Chassis fitted with engines, transmission, steering gear and axles (excluding also fitted with cabs), for motor vehicles	3231	784.10
78422	Bodies (including unit chassis-bodies; excluding cabs and body panels), for goods and materials vehicles	3232	784.22 784.23 784.24 784.26 784.27 784.28 784.29
78433	Brake assemblies (shoe, segment, disc, etc) and servo-brakes	3003	784.33
78437	Instrument dashboards, complete with instruments	2000	784.37
78441	Bodies (including unit chassis-bodies; excluding cabs and body panels), for passenger vehicles, for 10 persons or more	3232	784.41

Materials used other than those listed in this classification are coded to their relevant ASCC items. See explanatory notes for more detail.

MATERIALS USED CLASSIFICATION

CODE	DESCRIPTION	ASIC	ASCC
78442	Bodies (including unit chassis-bodies; excluding cabs and body panels), not elsewhere specified	3232	784.42
78444	Cabs, for motor vehicles (including concrete-mixer trucks), off-highway trucks and materials handling trucks	2000	784.44
78445	Road wheels	3003	784.45
78446	Transmission components, external to engines	3003	784.46
78448	Safety (seat) belts, harnesses and netting (including child seats and bassinet anchoring systems)	3003	784.48
78449	Body panels for motor vehicles (excluding for trucks and buses)	3231	784.49
78451	Parts and accessories for motor vehicles, off-highway trucks and materials handling trucks, not elsewhere specified	3003	784.51
78537	Parts and accessories of non-motorised cycles, side-cars, bicycles and other cycles	3245	785.37
78689	Parts for motor vehicle trailers, semi-trailers, the trailed components of other articulated vehicles, caravans and camper trailers (excluding wheels)	3232	786.89
78701	Unassembled motor vehicles, complete	3231	781.29 783.19 783.91 787.01
79192	Parts of railway or tramway locomotives or rolling stock (including underframes)	2000	791.92 791.93
81212	Radiators for central heating; air heaters with motorised fans, non-electric	3300	812.12
82161	Parts of passenger transport seats	2541	821.61
82193	Furniture, assembled, non-domestic, not elsewhere specified	2541	821.93
82232	Mattress protectors and covers (including wool underlays, excluding those of or stuffed with rubber)	2300	822.32
84541	T-shirts and tank tops, of knitted or crocheted fabric (including 'fashion singlets')	3002	845.41 845.42 845.45 845.46 845.47
84696	Made up textile parts of clothing and textile fabric cut to shape for clothing	2400	846.96
85191	Soles (including full soles) of rubber, moulded rubber and rubber composition (including one piece soles and heels)	3462	851.91 851.92
85193	Plastic heels	3474	851.93
87317	Parts and accessories for electricity meters	3357	873.17
87462	Automatic regulating or controlling and recording instruments and apparatus (excluding for motor vehicles, trucks and tractors)	3300	874.62
87464	Thermostats and similar instruments for automatic regulating or controlling, for motor vehicles, trucks and tractors	3233	874.64
87501	Instruments and similar apparatus (mechanical, electrical or electronic), for motor vehicles, trucks and tractors, not elsewhere specified	3233	875.01

Materials used other than those listed in this classification are coded to their relevant ASCC items. See explanatory notes for more detail.

MATERIALS USED CLASSIFICATION

CODE	DESCRIPTION	ASIC	ASCC
88210	Chemical preparations for photographic use (excluding varnishes and similar preparations)(eg emulsions, developers, fixers, intensifiers, reducers, toners, clearing agents)	3341	882.10
88270	Photographic plates, film and paper, sensitised, unexposed	3341	882.70
88412	Spectacle lenses	3481	884.12 884.13 884.14 884.16
88451	Frames, mountings and parts for spectacles, goggles and the like	3481	884.51 884.52
89281	Labels, of paper or paperboard, printed or imprinted	2640	892.81
89322	Sanitary ware, floor, wall, ceiling coverings, household and toilet articles, of plastics (excluding disposable cups)	3474	893.22 893.23 893.24 893.33 893.34 893.35
89336	Articles of plastics, not elsewhere specified	3474	893.36 893.91 893.96 893.97 893.98
89720	Imitation jewellery (exclude watch straps)	3400	897.20
89863	Magnetic tapes (including video tapes but excluding pre-recorded audio cassette tapes)	3351	898.63
89912	Floor mops, brooms, brushes and brushware and dusters	3483	899.12 899.15 899.16 899.17 899.18 899.22 899.23 899.24 899.25 899.75 899.76
97101	Non-monetary gold (including gold plated with platinum), unwrought or in semi-manufactured or powder form	1123	xxx

Materials used other than those listed in this classification are coded to their relevant ASCC items. See explanatory notes for more detail.
